Spinwave Pacific to distribute and support Spinwave Systems Wireless Mesh A³TM and Energy Management products in Australia and New Zealand

Spinwave Pacific today announced it has established a distribution partnership with Spinwave Systems to distribute the market-leading A³TM Wireless Mesh and Energy Management product lines. Spinwave Pacific will provide sales, support and training to Australia's and New Zealand's leading systems integrators and resellers.

The SpinwaveTM wireless sensors are perfect in permanent or temporary installations to establish a 'base line' of energy consumption and track performance improvements. They are easy to install and integrate easily into existing building automation systems from all major manufacturers without disrupting building operation.

US-based Spinwave Systems is a leading developer of wireless sensors and energy management products to the commercial building automation market in the Americas, Asia and Europe. SpinwaveTM's wireless mesh networks reduce the overall

installation costs of building automation systems. A³™ is designed for maximum reliability even in environments with severe RF interference.

Tony Carnovale, Technical Director of Spinwave Pacific said, “Spinwave Systems is a proven and complete remote I/O system that is compatible with industry standard building and industrial automation systems. The ability to connect to remote Modbus devices over such a low cost network is unique and a real cost saving for the burgeoning energy metering sector.”

“With the A³™ product line Spinwave™ have an extremely clever implementation of the 802.15.4 standard which makes the increased use of sensors to establish and maintain highly energy-efficient building operations an affordable and attractive proposition” said Tony Carnovale.

Spinwave™ and A³™ are registered trademarks of Spinwave Systems, Inc.
